making big
WAVS in the
voice logging
marketplace!

shown: LRX 35

The *LRX 37C* and *LRX 35*

Eliminates the potential ...

for oversights, omissions,
inaccuracies, errors,
mistakes and
misunderstandings,
with the new LRX
Telephone Logger Patch
technology!

The **LRX 37C** *and* **LRX 35**

Telephone Logger Patches
are engineered to compliment
your logging software.

The **LRX 37C** *and* **LRX 35...**
the connection protection for all your logged calls!

The new LRX 37C and LRX 35 Telephone Logger Patch technology is meeting the challenges of today's voice logging recording needs. These palm-sized logger patches easily connect phone to computer and provide crisp, clear, audio documentation of all recorded conversations.
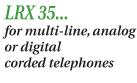

Globally, they are filling the audio logging requirements of law enforcement agencies, governments, brokerage houses, telemarketing centers, home and office security monitoring and a continually growing list of diversified applications.

Put them to work for you!

LRX 37C...
for single-line, cordless
or corded telephones

With the LRX-37C you just plug the duplex adapter into the telephone wall jack. Connect the phone line to the one side of the duplex adapter and the LRX-37C 7 ft. cord to the other side. Then, simply connect the 3 ft. cord from the LRX-37C to the computer microphone jack. Once connected, your logging software will interface with the LRX-37C to download and organize all your telephone conversations into your computer for instant playback.

LRX 35...
for multi-line, analog
or digital
corded telephones

Offering the same capability as its counterpart, the LRX 35's connect-ability is slightly different, but just as easy. Simply plug your telephone handset into the 35's modular jack. Then, plug the LRX 35's modular plug into your telephone and the 10 ft. connector cord into the computer's microphone jack. Like the 37C, the LRX 35 functions with today's current logging software enabling you to download and organize telephone conversations into your computer for instant playback.
